Midbrains Technologies

SOFTWARE TESTING

Project: Janki enterprises

1. Authentication

- Valid login with correct credentials
- Invalid login (wrong password/username)
- Empty field validation
- Password masking
- Session persistence after refresh
- Logout clears session
- Unauthorized dashboard access restriction
- Multiple failed login attempts handling
- Proper error messages

2. Product Module

- Product list loads correctly
- Correct name, price, and image display
- No duplicate products
- Product order consistency after refresh
- API failure handling
- Display on Home & Product page
- Broken image handling
- Price format validation
- Performance with large number of products

3. Home Page

- All sections load properly
- Navigation works correctly
- Header and footer visibility
- Responsive layout
- No overlapping elements

- No console errors
- Page load performance

4. Billing / Invoice

- Add/remove products
- Quantity increase/decrease
- Correct total calculation
- Prevent invalid quantity
- Proper invoice layout
- Print should include only invoice
- PDF download functionality
- Correct date/time display
- Proper currency format

5. Dashboard (Admin)

- Access only after login
- Data loads correctly
- Add/Edit/Delete product functionality
- Confirmation before delete
- Data updates instantly
- Logout functionality
- Unauthorized access blocked

6. UI/UX Testing

- Alignment consistency
- Button interactions
- Color and theme consistency
- Font readability
- Responsive design
- No broken layout

7. Security Testing

- Direct URL access blocked
- No sensitive data exposure
- Session handling
- Input validation

8. Performance Testing

- Page load speed

- API response handling
- No UI lag
- Handles multiple actions

9. Edge Case Testing

- Long input values
- Special characters
- Empty data handling
- Network interruption
- Refresh during operation
